

## Biome Project

As a culminating activity for our study of biomes, you are to complete a project over one of the biomes listed in our [biomes list](#). You have four options from which to choose; they are:

**Model and/or display**-- most likely Diorama or other three dimensional representation. Might also include a poster presenting other necessary information

Project should also include a Power Point presentation of flora and fauna of biome. Other required information may also be included in the slide show.

**Website** --posted on USD 417 web server. Use good web design techniques to communicate information about your biome. Should include links, but bulk of information must be entered by you. Pictures and text mixture is desirable.

**Research Paper** -- should be approximately 3-5 pages in length. It must be double spaced, with 14 point Times New Roman font and one half inch margins on top, bottom and sides. Any pictures must be in addition to the required length.

Project should also include a Power Point presentation of flora and fauna of biome. Other required information may also be included in the slide show.

**Original Video** -- you may produce a short video communicating information about your video. Short sections of non-copyrighted material, from outside sources, may be used

### All of the projects must include the following topics:

**Climate**- how location affects the climate, how climate affects the biome

**Flora**-- how climate affects flora, types of flora (Power Point presentation)

**Fauna**-- how climate and flora affects fauna, types of fauna large and small (Power Point presentation)

**Locations**-- where it exists on earth-- include maps with proper names if applicable

**Human/Environment Interaction**-- how man has affected it, how it has affected man

**Impact/importance**--why it is important for survival on the planet

**Glossary** of terms that pertain to your biome with definitions.
